THE JOB HUNT COCKPIT

Real openings.
Scored and explained.
Zero fake data.

21 verified employer boards · mail fraud screening · self organizing tracker · Chrome helper · free and open source

github.com/siddhant-pardeshi/JobForge · v1.4 · October 2026

THE PROBLEM IT SOLVES

Job hunting is broken. This fixes the workflow.

Boards bury engineering roles

Sales and BDA listings at software companies crowd out real engineering work. JobForge classifies the work described, not the company name, and keeps every exclusion auditable.

Fraud mails drain accounts

Fee demands, UPI traps and fake HR domains reach candidates daily. 23 indicators screen posts, full emails, and the open mail inside Gmail and Outlook.

Applications vanish

Clicks are not proof. A tracker with a real state machine counts a submission only when a receipt backs it, and blocks duplicates.

Relocation math is opaque

Fixed versus variable, deposits versus rent, bonuses versus monthly cash. Three scenarios answer: would the move actually pay?

ARCHITECTURE

One machine, one cockpit, one click that submits.

Your resume
parsed locally into a verified profile

21 live boards
polled every 20 min, closures detected

Scoring engine
seven components, every reason shown

Scam shield
23 indicators on posts and open emails

Packets
cover letter, referral note, prep kit

Chrome helper
capture, autofill, mail screening

Self moving board
rounds scheduled, reminders, receipts

Your submit click

The one step that always stays with you. Prefill yes, submit no: LinkedIn and Naukri ban automated activity and the ban lands on the user's account, so the helper stops one click short everywhere.

All of it runs on one machine: Express API, JSON store, React 19 client. No database, no cloud, no telemetry.

5,843

VERIFIED BOARDS

23
FRAUD INDICATORS

38
TESTS PASSING

FEATURE 1 · RESUME ENGINE

Your resume becomes a verified profile.

Resume in, profile out.

PDF, DOCX or pasted text. Parsed on your machine, corrected by you, trusted by the engine.

Built for Indian resumes

Space eating PDF fonts are repaired by camel case reconstruction: SpringBoot maps to Spring Boot, RESTAPIs to REST APIs. A 70 skill synonym taxonomy means Java 17 counts as Core Java while JavaScript never counts as Java.

Confidence, not blind trust

Every extracted fact carries a confidence chip. Skills, projects, education and certifications are all editable before anything counts, and the original file is never modified.

The highest leverage edit

Skills drive 30 of the 100 score points. Saving the profile re-ranks every job instantly, so ten careful minutes here upgrade every score, packet and referral note the engine produces.

FEATURE 2 · LIVE BOARDS

Real postings, refreshing themselves.

CLOSED · after 2 misses

Boards that refresh themselves.

A scheduler polls every board every 20 minutes. Closures are honest: two misses to close, reposts reopen.

Verified, then polled

Every board in the registry was probed against its live endpoint before shipping. The scheduler polls all of them on your interval and logs every run.

The two miss rule

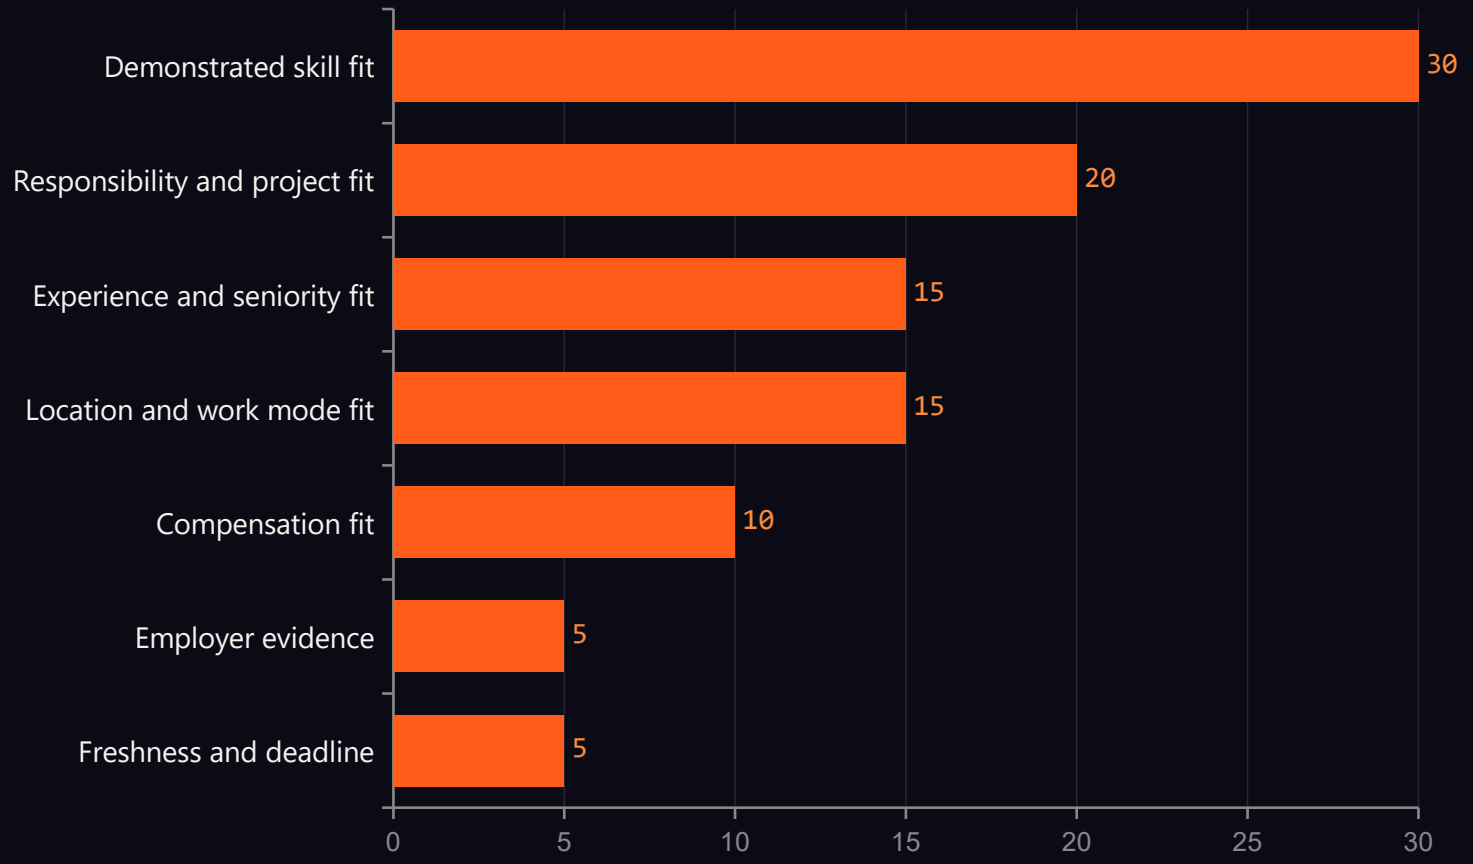

A posting that vanishes gets one grace miss, because boards drop listings transiently. Two consecutive misses mark it closed with a timestamp; reposts reopen automatically.

Grow your coverage

Paste any Greenhouse, Lever or Ashby careers URL: the provider and handle are detected and the board probed before saving. Coverage honesty is a feature, not a bug.

FEATURE 3 · SCORING ENGINE

A score you can argue with.

0 to 100, fully explainable

Open any card and see which skills matched, which are missing, and why it landed in its lane. Unknowns stay neutral: an unlisted salary never buries a great Pune role and never fakes a relocation verdict.

Lanes

- Best in Pune
- Remote from Pune
- Relocation
- Needs verification
- Filtered out · reason shown
- Closed or redacted

Weights are sliders in Settings. Drag them and the board re-ranks live.

FEATURE 4 · DEFENSE

Fraud screening that earns its keep.

Fraud, screened three ways.

Paste it, screen a full email, or check the open mail inside Gmail and Outlook with one click.

the open mail, nothing more

indicators hunting

⚠ Asks for money
Registration fee of ₹499 via U P I. No employer ever charges you.

Reply to differs from sender
Replies divert to another mailbox. A takeover trick.

Link text says careers.tcs.com, href goes elsewhere
Never tap it. Type the company address yourself.

fee · upi · otp · reply-to · sender domain · link lies · shorteners · u

Three screens

Paste any message, analyze a full email with sender, reply-to and link inspection, or pair the helper and check the open mail inside Gmail and Outlook with one click.

Calibrated, not paranoid

A WhatsApp contact alone is never declared fraudulent. A payment demand blocks automation regardless of the skill match. Every verdict shows the evidence behind it.

Private by design

The screen reads exactly one email, the one you clicked on. Nothing is read in the background, and the log stays on your machine.

FEATURE 5 · DOCUMENTS

Packets that sound like you.

Documents that sound like you.

Built from your resume against each description. Nothing invented, gaps become questions.

Tailored cover letter

copies in one click · your voice, grounded in facts

Referral message · 98 characters

"Hi, I built BankNest in Core Java and Spring Boot.
Could you refer me for this role?"

send it before cold applies

refer one person per company

Grounded, always

The cover letter connects your real projects to this description's requirements. Nothing is invented: if the resume does not support a claim, the packet asks you about it instead.

The referral edge

A ~100 character referral message per company, ready to send. Referred applications convert several times better than cold applies, and the message is already written.

Prep kit included

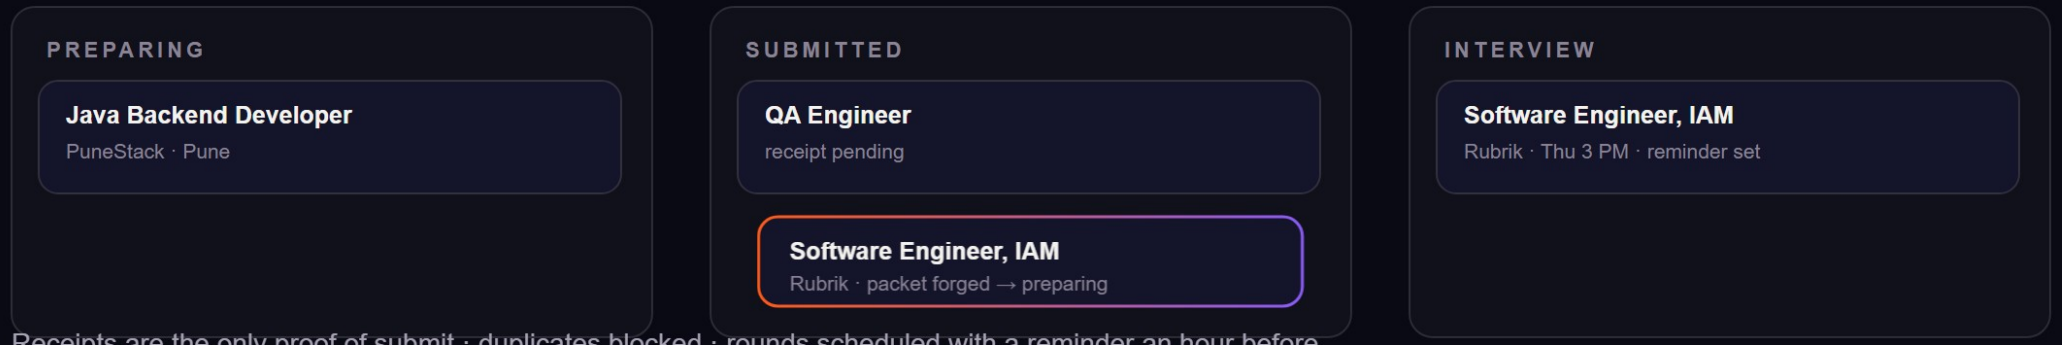

Five to eight questions this interviewer would plausibly ask, grounded in required skills and real projects. Practice them aloud before the call.

FEATURE 6 · PIPELINE

A tracker that organizes itself.

A pipeline that moves itself.

Facts move the cards: packet forged, round scheduled, receipt attached. The submit click stays yours.

Receipts are the only proof of submit · duplicates blocked · rounds scheduled with a reminder an hour before

Moves on facts

Packet forged moves a role to preparing. Round scheduled moves it to interview with a reminder an hour before. Receipt attached makes the submission count.

Live by the second

The board re-renders every five seconds with spring animations. Leave it open on a second screen and watch the pipeline breathe.

Honest bookkeeping

Submissions count only with receipt evidence, duplicates are blocked, and the funnel shows what is actually working for you.

FEATURE 7 · DECISIONS

Would the move actually pay?

Cautious

Net	₹61,200
Costs	₹33,600
Surplus	₹27,600
vs Pune	+₹8,100

Base

Net	₹68,000
Costs	₹30,000
Surplus	₹38,000
vs Pune	+₹9,000

Favorable

Net	₹73,440
Costs	₹27,600
Surplus	₹45,840
vs Pune	+₹11,700

Separate the truth

Fixed versus variable pay, deposits as liquidity never monthly cost, joining bonuses excluded from every recurring figure, and a Pune baseline for comparison.

Unknown stays unknown

Undisclosed pay returns affordability unknown plus the exact questions to ask the recruiter. The role stays visible; the guess never happens.

Your budgets win

Six city default budgets across nine categories, all editable. Your numbers override every default the moment you save them.

FEATURE 8 · OPTIONAL BRAIN

Works free. Sharper with a key.

Everything runs with no key at all. A provider only polishes the cover letters and bullets. Keys live in a git ignored local file and travel only to the provider you chose.

Groq	`console.groq.com/keys`	**Free tier**	Fastest start, generous limits, the recommended first key
Anthropic Claude	`console.anthropic.com/settings/keys`	**Pay per use**	Best cover letter writing. Haiku is cheap, Sonnet is the finest
OpenAI	`platform.openai.com/api-keys`	**Pay per use**	Solid all rounder. gpt-4o-mini is inexpensive for this workload
Ollama	`ollama.com/download`	**Free, local**	Runs offline on your machine. The resume never leaves it
OpenRouter	`openrouter.ai/keys`	**Free daily models**	One key, hundreds of models to experiment with
Z.ai GLM	`z.ai/manage-apikey/apikey-list`	**Pay per use**	GLM models through an OpenAI compatible endpoint

Settings, AI provider, paste the key, press Test. The sidebar dot turns green with the model name.

FEATURE 9 · CHROME HELPER

LinkedIn and Naukri, on your team.

01

Send to JobForge

One click on any posting you are viewing on LinkedIn, Naukri, Greenhouse, Lever, Ashby, SmartRecruiters or Workday. It lands in your cockpit scored and scam screened within a second.

02

Autofill with JobForge

Application forms fill from your saved data: name, contact, links, notice period, approved answers. Every value is remembered and editable, so a wrong fill never repeats.

03

Check this email

Inside Gmail and Outlook, the open mail is screened in place with a color coded verdict panel. It reads exactly one email, the one you clicked on, and nothing else.

The one line that matters

The helper never presses submit. Not on any site. LinkedIn and Naukri ban automated activity and the ban lands on your account, so the helper stops one click short and leaves that click to you. Prefill yes, submit no.

1. Copy the token from Settings
2. Load unpacked the extension folder
3. Pair, Test, browse as always

FEATURE 10 · SHARING

Open to everyone. Private on demand.

Open access

The default. Anyone with the link uses the full hunt free: live boards, scored matches, scam screening, pay insights, relocation math.

Private with code

One flip in Settings and visitors need the six digit code. Flip back and the link is open again. Instant, both ways.

You are the admin

Flip it on the host machine with one click, or from any browser with the admin code. Guests can never flip it: they get a 403.

Guests stay read only

The server enforces it, not a promise: settings, profile, tracker changes, imports, exports and resets all require the owner. Secrets, the resume text and the host filesystem path never appear in a guest response. Verified by the test suite over the live tunnel.

Hosting in two lines

`npm start` · `cloudflared tunnel --url http://localhost:8787` · share the URL. A permanent home is the same server on any VPS behind HTTPS.

ENGINEERING

Built like a product, not a script.

Stack

- Express API over a JSON store, atomic writes
- React 19, Vite 7, Tailwind 4, Framer Motion 12
- Chrome MV3 extension, vanilla, no build step
- No database, no cloud, no telemetry

Quality gates

- 38 tests covering the hard guarantees
- Classification edges and fraud blocking
- Closure detection and dedupe provenance
- Salary parser across four formats

Honest limits

- Listing access is read only
- LinkedIn and Naukri stay capture only
- Relocation math is a planning aid
- Refresh runs while your machine runs

Exports include everything: profile, tracked jobs, packets, logs. Reset wipes it all locally. The repo carries a full build context document so any developer or AI tool can extend it without breaking the invariants.

38 tests · MIT · zero telemetry

Forge your applications. Land the role.

Star the repo. Fork it. Break it. Improve it.
